

SpringbootApplication

除了本身的@SpringBootApplication注解外,还需要添加一个对mapper层接口进行处理的注解:

```
1 //扫描mapper层中所有的接口,将其放入spring中,括号内的是mapper层所在的位置
2 @MapperScan("com.example.mapper")
```

Java

```
1 usage
2 @SpringBootApplication
3 @MapperScan("com.example.mapper")
4 public class SpringbootApplication {
5
6     public static void main(String[] args) { SpringApplication.run(SpringbootApplication.class, args); }
7
8 }
```
