读取数据存入缓存-storage

登录成功之后就可以存储用户数据到缓存里面

uni.setStorageSync('xm-user', res.data)

```
j.js...
                 调试器 2
                Wxml
                           Performance
                                            Console
                                                          Sources
                                                                       Network
                                                                                      Memory
                                                                                                   AppData
                                                                                                                 Storage
                                                                                                                              Security

header里的token数据是怎么存储的?

uni.getStorageSync('xm-user')?.token
